USER GUIDE · VERSION 1.0

The complete guide to running your store on JayPOS.

A friendly walkthrough for Admins, Managers, and Cashiers — covering login, daily operations, the checkout flow, offline mode, and what to do when something goes sideways.

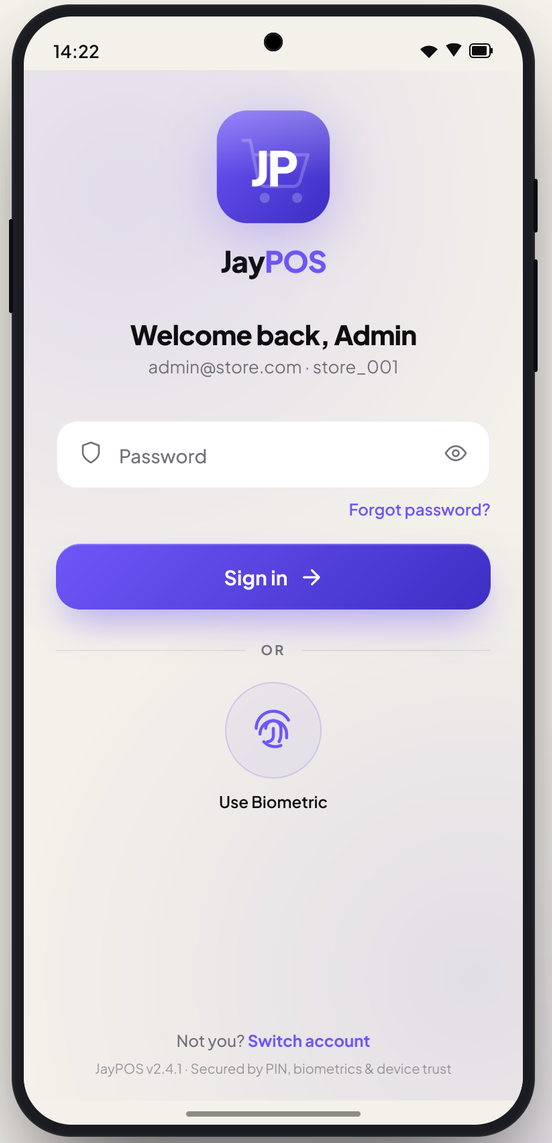

PRODUCT
JayPOS Mobile

AUDIENCE
Admin · Manager · Cashier

VERSION
1.0 — May 2026

PLATFORM
Android 8.0+ · iOS 12.0+

JayPOS
Mobile Point of Sale System

01 · GETTING STARTED

Welcome to JayPOS — a mobile-first POS for modern retail.

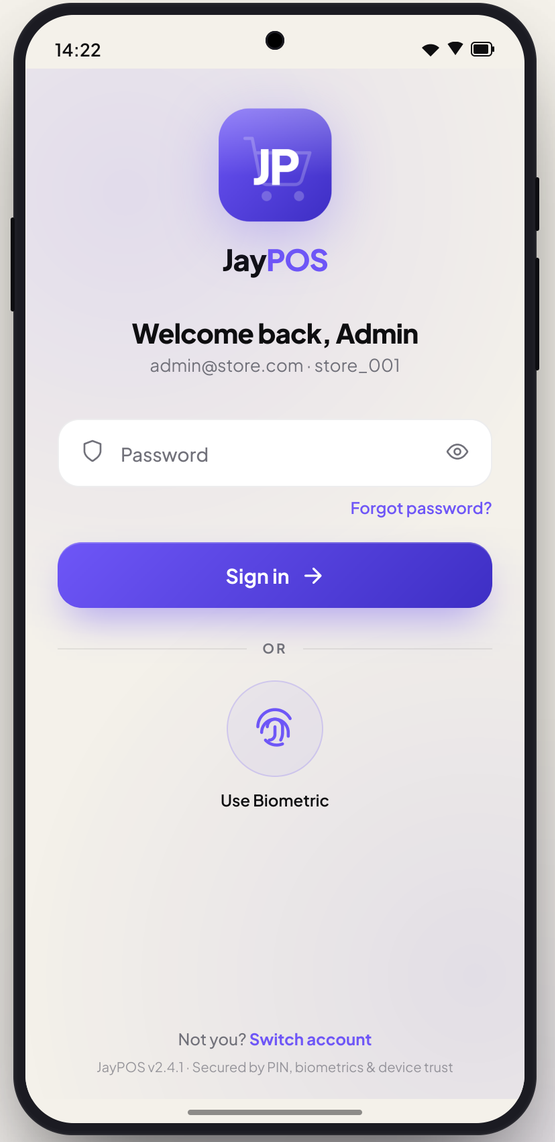

JayPOS runs your storefront from a single device. Process sales, manage inventory, track customers, and keep running even when the internet drops.

Mobile-first
Designed for phones — your team carries the register in their pocket.

Works offline
Keep selling without internet — JayPOS syncs every transaction when you're back online.

Biometric login
Fingerprint or face — no shared passwords floating around the till.

Cash, card, transfer
Accept the payments your customers actually use, with receipts to match.

02 · SIGN IN FOR THE FIRST TIME

Your first login takes about 20 seconds.

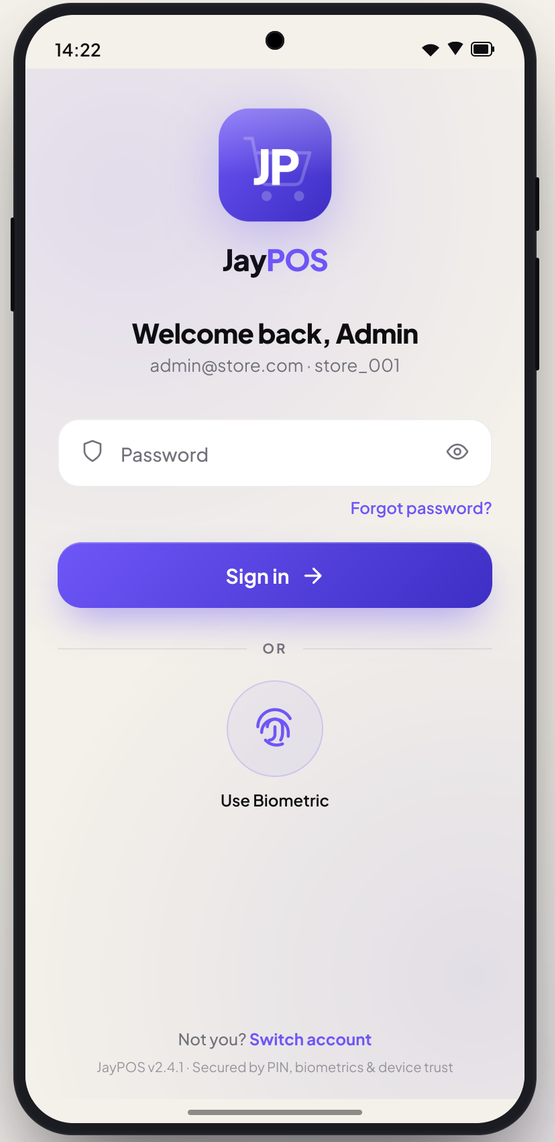

01 **Open JayPOS on your device.**
Look for the gradient `JP` tile on your home screen. Android 8.0+ or iOS 12.0+.

02 **Tap *Biometric Login*.**
Scan your fingerprint or face. On first launch, the system registers your biometric to your store account.

03 **Pick your store.**
If you work across branches, choose the one you're starting your shift at from the dropdown.

04 **You'll land on the role-specific home.**
Admins see everything; Managers see operations; Cashiers see the checkout tile front-and-center.

i **Need to switch accounts?** Tap the avatar in the top-right of the login screen. You can have multiple staff biometrics enrolled on one device.

03 · WHO DOES WHAT

Three roles. Clear boundaries. No accidents.

Every staff member is assigned an Admin, Manager, or Cashier role. JayPOS shows them only the screens they need — fewer mistakes, faster training.

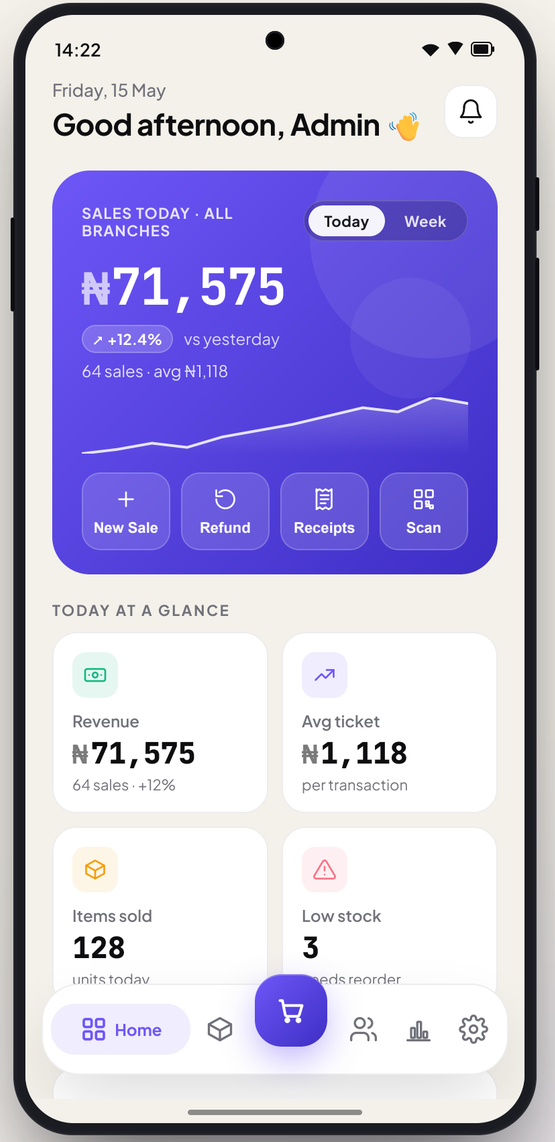

ROLE	KEY DUTIES	HAS ACCESS TO	RESTRICTIONS
A **Admin**	Full system control. Manage users, configure stores, set tax & pricing rules, audit everything.	Dashboard · Inventory · Customers · Analytics · Settings · **User management**	None
M **Manager**	Daily operations, inventory oversight, staff supervision, end-of-day reporting.	Dashboard · Inventory · Customers · Analytics · Settings	No user management
C **Cashier**	Process transactions, manage the cart, look up customers, share receipts.	Dashboard · Customers · Settings	No inventory edits · No refunds

04 · HOME SCREEN

Your store, in one scroll.

Open the app and you're looking at today's revenue, transaction count, and the four payment shortcuts you need most. Tap any KPI to drill in.

- **Today / Week toggle** — switch between a same-day pulse and a 7-day trend line.
- **Quick actions** — New Sale · Refund · Receipts · Scan, all one tap from home.
- **Payment mix** — see at a glance what % of revenue came from cash, card, or transfer.
- **Recent activity** — last five transactions with green for sales, pink for refunds.
- **Sync indicator** — green dot in the status bar means you're talking to the server.

PART TWO

For Admins.

Full system access — user management, inventory rules, store configuration, and audit-grade analytics. This is the chapter for people who own the numbers.

- Manage products & inventory
- Bulk CSV imports
- Add & remove staff
- Store configuration

05 · ADMIN — ADD A PRODUCT

Adding a single product.

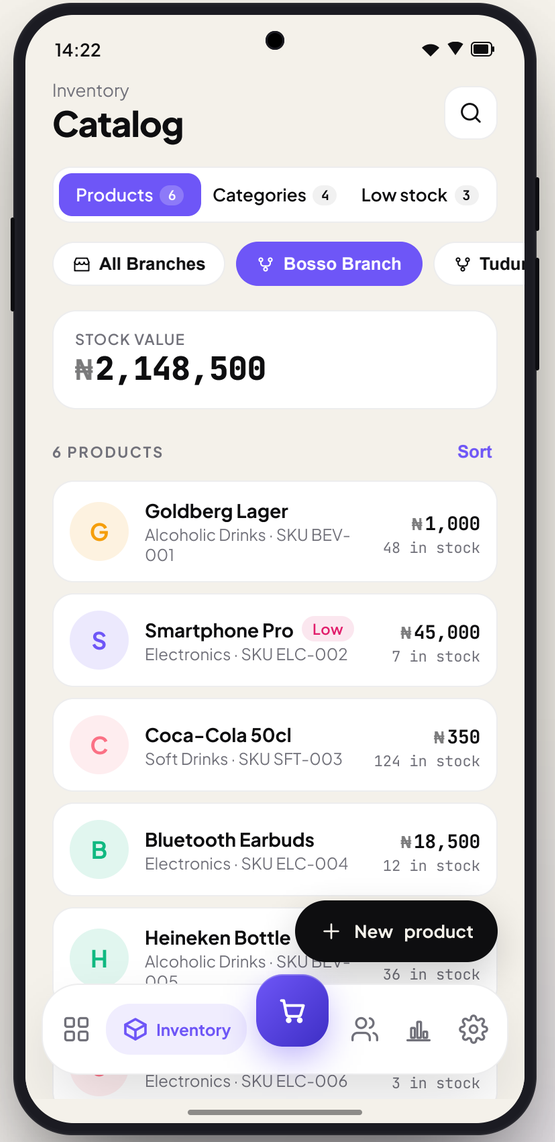

Four taps from any screen to a saved product, live across all branches that share your catalog.

01 **Tap the Inventory tab in the bottom nav.**
Bottom-left of the floating pill. The box icon — second from the start.

02 **Hit the + Add product button.**
It sits in the floating action area to the right of the segmented tabs.

03 **Fill the required fields.**
Name · SKU · Category · Marked & Effective price · Tax rate · Unit. Barcode is optional — tap the camera icon to scan and auto-fill.

04 **Tap Save product.**
It's live immediately across selected branches. Edits take effect on the next transaction.

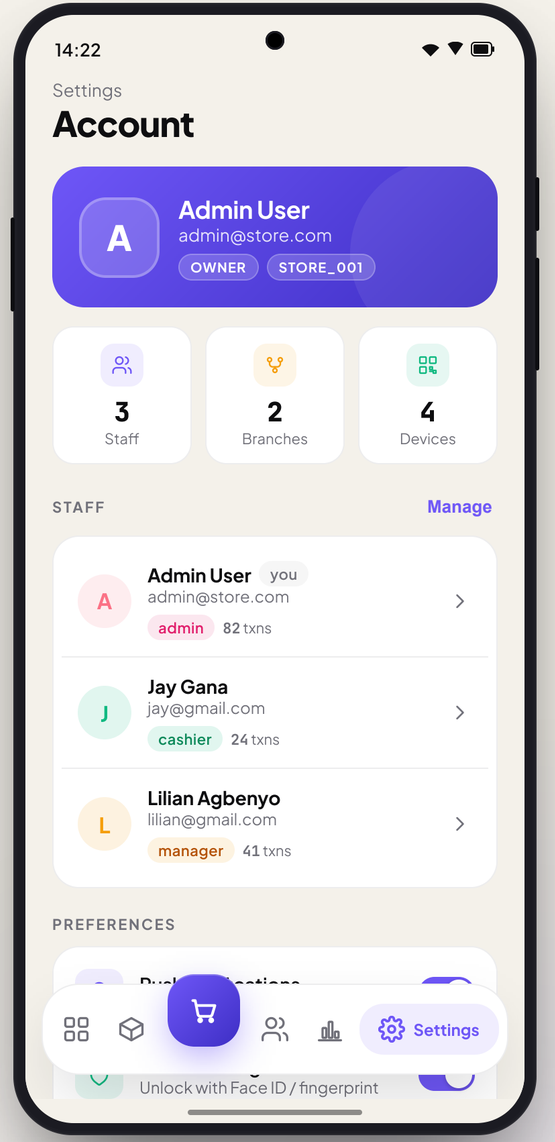

06 · ADMIN — CSV BULK IMPORT

Loading 200 products in under a minute.

Opening a new branch? Migrating from another POS? Skip the one-by-one and use CSV import.

PATH	Settings → Inventory → **Bulk Import**
STEP 1	Download the CSV template — it has the exact columns JayPOS expects.
STEP 2	Fill in your product data: Name · SKU · Marked Price · Effective Price · Cost Price · Tax Rate · Category · Unit.
STEP 3	Pick the target branch from the dropdown (or "All branches").
STEP 4	Paste the CSV content into the import dialog and tap **Import**.
HEADS UP	Duplicate SKUs are flagged before commit — review and either skip or overwrite. Nothing is imported until you confirm.

PART THREE

For Managers.

Run the floor. Watch stock levels, brief the team at start-of-day, sign off on end-of-day reports. You have the full operational view — everything except user creation.

- Daily ops checklist
- Low-stock alerts
- Analytics & reporting
- Customer insights

07 · MANAGER — A TYPICAL DAY

The start-of-day checklist.

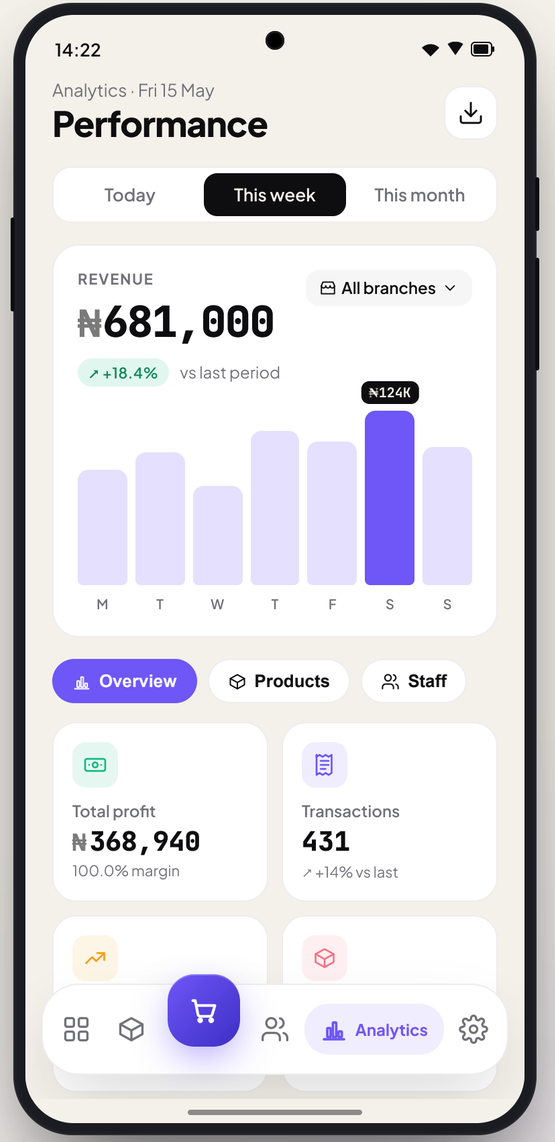

Before you unlock the door, run this five-minute sweep on JayPOS. The dashboard is built for it.

01 **Sign in and check the sync indicator.**
Green = online and pushing to the server. Red = offline; transactions are queued locally.

02 **Review low-stock alerts on the Inventory tab.**
Anything under threshold appears at the top with a reorder progress bar.

03 **Glance at yesterday's payment mix.**
Brief the team if cash share spiked — likely an ATM problem nearby — or if card share dropped — likely a network blip.

04 **Open Analytics → Staff and flag standouts.**
Recognize the top cashier from the previous day; check whoever's behind for blockers.

PART FOUR

For Cashiers.

The job: move queues, take payments, share receipts. JayPOS keeps everything you need — search, scan, cart, payment — within one thumb's reach of the FAB.

Process a sale | Barcode scanning | Cash · Card · Transfer | Receipt sharing

08 · CASHIER — BUILD THE CART

Find the product. Add it. Adjust.

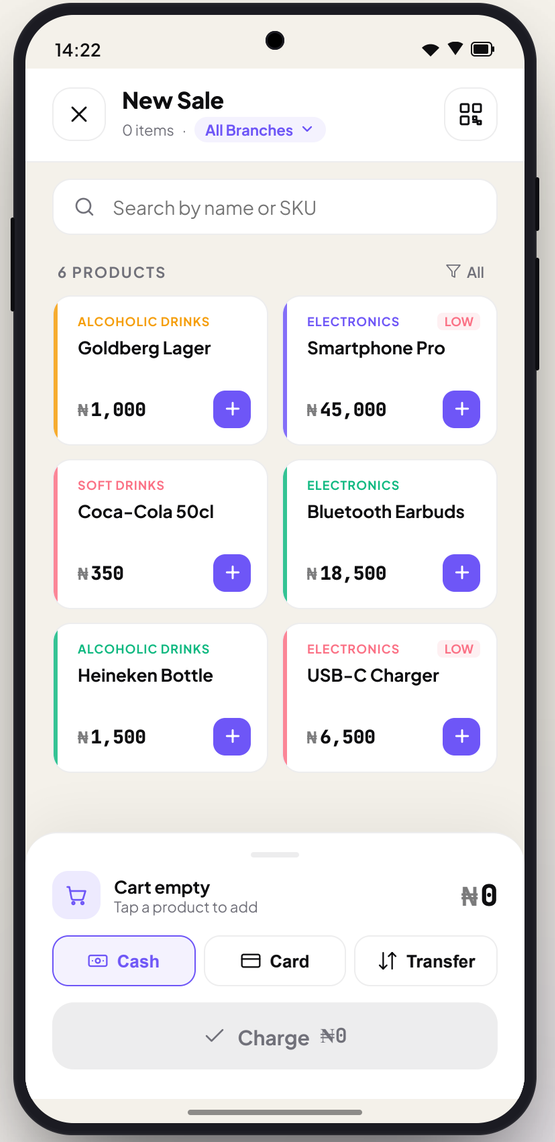

From the home screen, tap the cart FAB (the floating gradient pill in the bottom nav). The checkout sheet slides up.

01 **Tap the New Sale FAB.**
Center of the bottom navigation. Translates up about 14px above the bar — that's your visual cue.

02 **Search or scan.**
Type in the search bar — name or SKU. Or tap the QR icon to scan a barcode. Camera access required.

03 **Tap a product card to add it.**
The cart drawer counter increments. Tap again to add another.

04 **Adjust quantities.**
Expand the cart drawer. Use `+` / `-` next to each line. Swipe left on a line to remove it entirely.

09 · CASHIER — TAKE PAYMENT

One tap to charge. One tap to share the receipt.

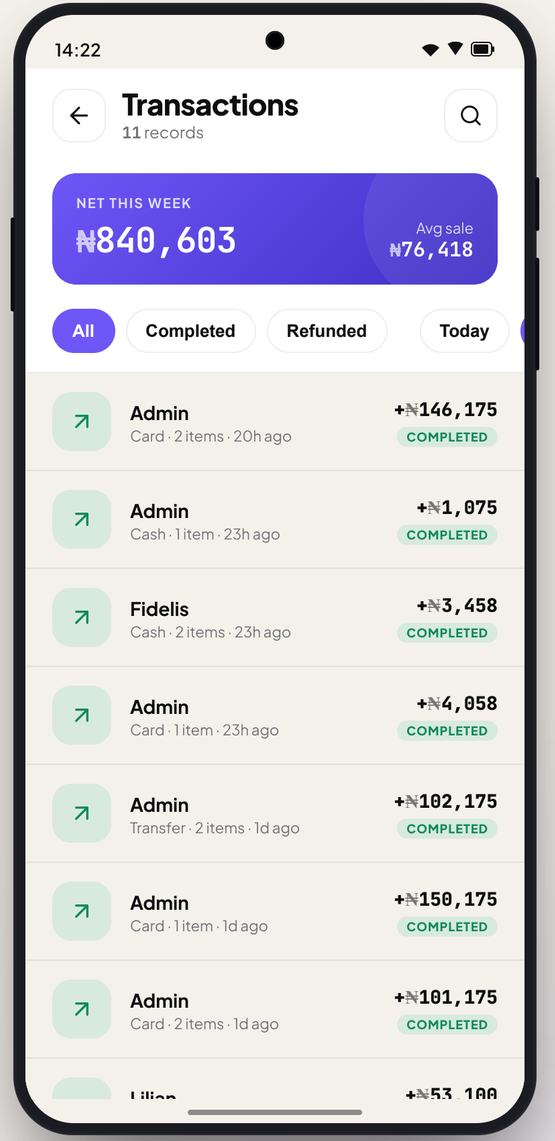

Cash
Instant. Tap Complete and hand back change. JayPOS records the denomination if you enter it.

Card
Tap-to-pay or chip-and-PIN through your linked terminal. Confirmation auto-syncs back.

Transfer
Mobile wallet or bank transfer. Customer sends, you tap "Confirm received."

05 **Review the total — including 7.5% VAT.**
Subtotal, tax, and final amount are stacked at the bottom of the cart drawer.

06 **Tap Complete Transaction.**
Receipt generates automatically. Hit the share icon to send by email or SMS if the customer asks.

10 · CUSTOMERS (ALL ROLES)

Your regulars, organized.

Everyone sees Customers — the difference is what you can do there. Cashiers tag a sale to a name; Managers see lifetime value; Admins edit profiles.

C — Cashier

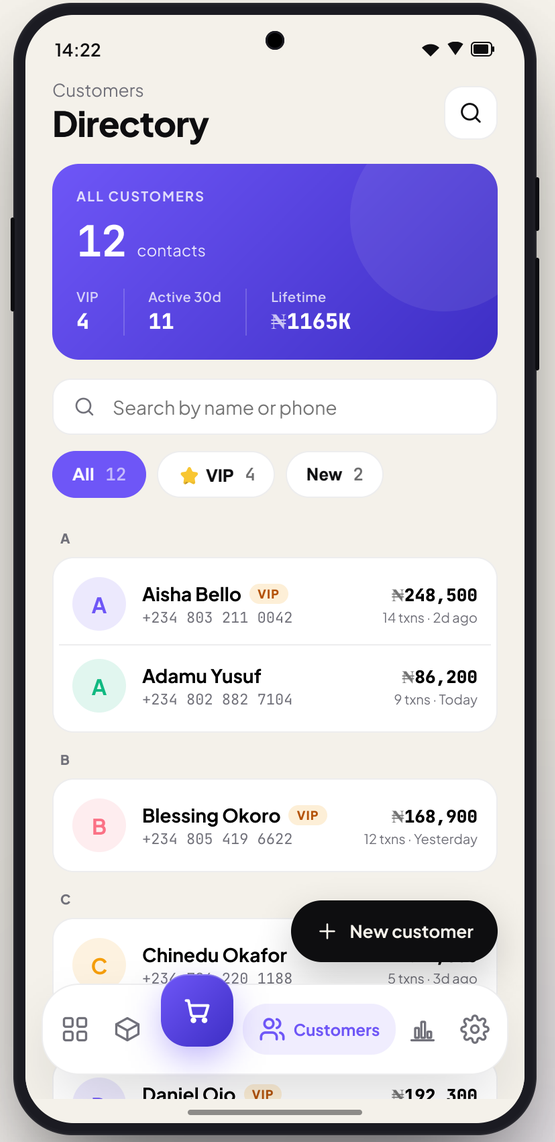

Search a customer at checkout by name or phone, attach the sale, share the receipt.

M — Manager

Filter by VIP or New, drill into purchase history, identify your highest-value customers.

A — Admin

Edit contact info, merge duplicate profiles, export the directory for marketing.

11 · OFFLINE MODE

Keep selling when the internet doesn't.

JayPOS is offline-first. Lost connection? Keep ringing up sales. When the signal comes back, everything syncs in the background — no manual catch-up.

GREEN DOT · ONLINE

You're live

Transactions push to the server as they happen. Inventory updates everywhere in seconds.

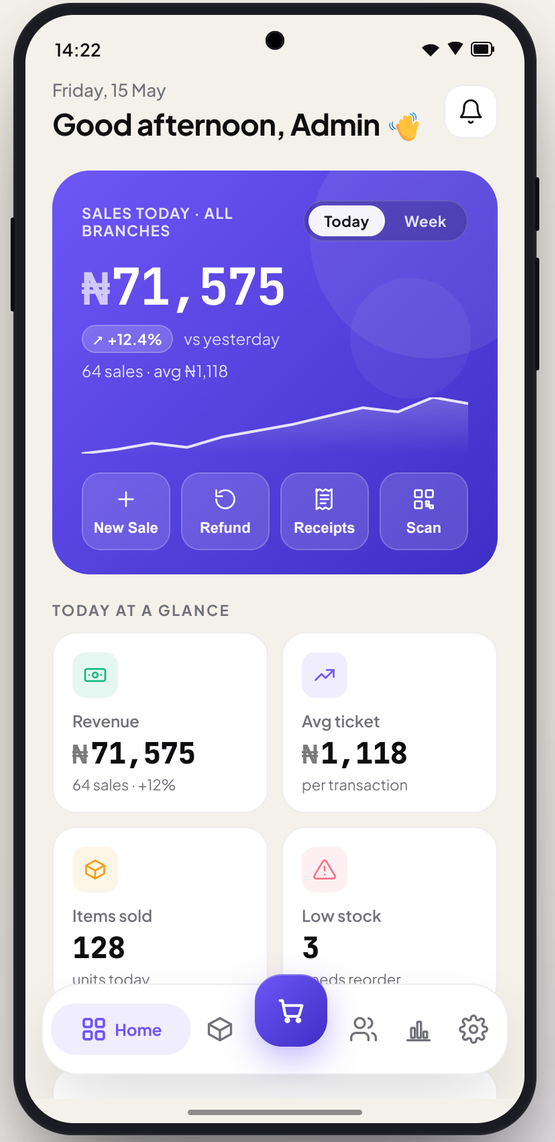

RED DOT · OFFLINE

Local queue

Everything is stored on the device. A queue badge shows pending items waiting to sync.

WHAT YOU CAN DO OFFLINE

- Process sales — cash, card (via terminal), and transfer (manual confirm).
- Search products & view cached customer profiles.
- Add products to inventory (synced as additions, not edits).
- Print or share local receipts.

12 · TEAR-OUT REFERENCE

Pin this near the till.

The twelve gestures and shortcuts that cover 90% of what your team does in a shift.

LOGIN

Biometric sign-in

Tap the fingerprint at the bottom of the login screen.

`Tap` `Hold`

NEW SALE

Open the checkout

Tap the gradient cart FAB in the center of the bottom nav.

`FAB`

ADD PRODUCT

Scan a barcode

Tap the QR icon → grant camera → frame the code.

`QR`

ADJUST QTY

± in the cart

Expand the cart drawer · use + / – per line · swipe left to remove.

`+` `-` `Swipe`

TAKE PAYMENT

Cash · Card · Transfer

Tap the method tile, then Complete Transaction.

`1` `2` `3`

RECEIPTS

Share by email or SMS

Tap the share icon on the receipt that auto-appears post-sale.

`Email` `SMS`

REFUND

Admin or Manager only

Transactions → tap the line → Refund. Cashier needs sign-off.

`Admin`

LOW STOCK

See what to reorder

Inventory tab → Low Stock segment. Items show a reorder bar.

`Inv`

BRANCH SWITCH

Change active store

Tap the branch pill in the New Sale header or your profile.

`Pill`

SYNC STATUS

Green or red dot

Status bar shows green = online, red = offline + queued.

`•`

END OF DAY

Settle the till

Analytics → Today → Export. Reconcile cash drawer to recorded cash sales.

`Export`

HELP

Contact your admin

Settings → About → Contact. Reach your store administrator first.

13 · WHEN THINGS GO SIDEWAYS

The five things that go wrong — and the fix.

PROBLEM	CAUSE	FIX
Can't log in.	Biometric not registered, or device is offline at first login.	Check internet, retry biometric, or contact your admin to re-enroll your fingerprint / face.
Product not found.	Item isn't in inventory, or there's a typo in the search.	Have an admin add it via Inventory → + Add Product. Double-check spelling and SKU.
Transaction fails.	Internet dropped mid-charge.	JayPOS auto-switches to offline. The sale is queued — try again or wait for sync.
Barcode scan fails.	Camera permission denied, poor lighting, or barcode not registered.	Allow camera in device settings, move into better light, or verify the SKU's barcode in product settings.
App feels slow.	Local cache bloated or device storage near full.	Settings → Cache → Clear · restart the app · free up storage on the device.

14 · FREQUENTLY ASKED

Quick answers, plus how to reach a human.

Q How do I reset my biometric login?

Settings → Security → Biometric. Disable, then re-register your fingerprint or face. Takes about 30 seconds.

Q Can I change a product's price after I've entered it?

Yes. Inventory → tap the product → edit Marked or Effective price → Save. Changes apply to the next transaction.

Q Can two cashiers use one device?

Yes — multiple staff biometrics can be enrolled. Use the avatar switcher on the login screen to swap accounts between shifts.

Q What if the app crashes during checkout?

Your cart is auto-saved every change. Reopen JayPOS and you'll be prompted to resume the in-progress sale from exactly where you left off.

Q How do I roll back an accidental sale?

Cashiers can't refund — flag it to your Manager or Admin. From Transactions, they tap the line and choose Refund.

Q Where do I see end-of-day totals?

Dashboard → Today, or Analytics → Today. Managers can export a CSV from Analytics to reconcile against the cash drawer.

NEED A PERSON?

Reach your store administrator first.

Most issues — login, refunds, new products, biometric reset — can be resolved in-store. For anything else, your admin has the escalation path to JayPOS support.
